## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments filed 3/26/08 have been fully considered but they are not persuasive. The applicant argues that the bow shape is clearly defined. The examiner disagrees as there are many types of bow such as bows to wrap a gift. It is suggested to provide specific structural language such as a groove in the longitudinal cross section. The applicant argues the back scratcher does not have any removable parts. The examiner disagrees, as stated in the prior office action the Wedermeyer teaches holding pins that would be capable of being removed. The elastic handle of Wedermeyer can function as the backscratcher as stated in the prior office action.

### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-6 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The applicant states the device which has been bent "like a bow." It is unclear to what the applicant is trying to claim as the language like a bow is vague as there are many kinds of bows.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 3-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wedermeyer (US D208,894) in view of Fong (US 5,185,902). Wedermeyer teaches a portable shoehorn with the shoehorn portion having a shape like a bow with a backscratcher located at the opposite distal end. The device further teaches an elastic body (the handle) removable via the holding pins to either the shoehorn or backscratcher portions. Wedermeyer does not teach the handle portion being capable of folding. Fong teaches combination shoehorn brush having a folding handle that folds in half at 231. It would have been obvious to one of ordinary skill in the art to modify the teachings of Wedermeyer with Fong to reduce the overall length of the device.

As to claim 3, Wedermeyer teaches the hand having a corrugated projection at a bent end with the fingers projecting from the right and left side.

### ***Allowable Subject Matter***

Claims 2 and 5-6 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.
